

INERTIA X FRAME™

in-er-tia: bodies at rest, stay at rest

The lightest full-length ground pad ever produced. With heavy 75D bottom material, the InertiaXFrame™ is more durable than other ultra-lightweight pads. Lighter, more compact, more durable and more comfortable.

Weight:

- 258 g/9.1 oz (without Bulb Pump)
- 301 g/10.6 oz (with Bulb Pump)

Dimensions

- Length: 1829 mm/72 Inches (Inflated)
- Width: 457 mm/18 Inches (Inflated)
- Height: 38 mm/1.5 Inches (Inflated)

Materials:

- Top: Lightweight 30 D Ripstop Nylon - Chartreuse Neon Green
- Bottom: Durable 75 D Polyester – Charcoal Gray

Technologies:

- Loft Pockets: Reduce weight and size while maintaining comfort, durability and warmth. Loft Pockets reduce the compaction of sleeping bag insulation, eliminate conductive heat loss and effectively capture convective body heat in the dead air space.
- Body Mapping: Reduced size and weight by giving support where you need it.
- NobleTek™ insulation is possible since the pad has a Klymitizer inflate port as well as a mouth-inflate port. It is not required that you use NobleTek gas, though, if a firmer pad is desired you can use the Klymitizer and argon KwikShot canister to “top off” after mouth-inflating. You can also use the included High-pressure Bulb Pump to achieve a firmer pad.

Uses:

- 3 Season Light Weight Pad: Simply use mouth to inflate and, if necessary, top it off with a Bulb Pump to reach high pressures (for bigger guys).
- 4 Seasons Light Weight Pad: Use Argon to fully inflate.
- Used in Combination with another Pad for 4 Seasons camping: Simply put the InertiaXFrame under any existing pad and it acts like a cot to lift you off the ground for increased warmth and comfort.

Accessories:

- High-pressure Bulb Pump (included)
- Compacting Stuff Sack (include)

The InertiaXFrame represents multiple revolutionary advances in ground pad technology. Klymit is a “Solutions” company making outerwear and outdoor gear lighter, thinner, better.
